

GenZCY - Build With Vibe

4 weeks | 8 sessions x 2h | 1-on-1 mentorship

A private program for business owners. You don't learn to code. You learn to architect websites and direct AI to build them. Every session ships real code.

Stack: Vite + TailwindCSS (FE) | Express JS (BE) | MongoDB (DB) | Resend (Email) | JWT (Auth) | Midtrans/Stripe (Payments)

S1 Introduction to Vibe Coding Responsibly

Campus vs Practicals vs Vibe Code path comparison. Dev history. OpenCode + PromptAudit setup. Zero-level vanilla stack (HTML/CSS/JS, JS backend, SQLite). Deploy to Netlify via GitHub.

S2 The Prompt Architect

AI history from expert systems to LLM. Context management (MCPs, Skills, Markdowns). SDLC & Blackbox Dev (error-driven, test-driven). Clean code, clean repo. Fork repo into 2 projects, deploy both.

S3 Do Not Reinvent The Wheels

Why frameworks exist and their tradeoffs. Vite + TailwindCSS + Express + MongoDB. Complete beginner dev track. Build and deploy a framework-based app.

S4 Trust, But Verify

pino structured logging. Break case: intentional bug to trace and fix. Analytics (Plausible/GA). Business case: simulate visitor, capture analytics. Log viewer + analytics dashboard.

S5 From Click to Cash

Booking form + payment gateway (Midtrans/Stripe). Webhook confirmation + email receipt. Break case: webhook failure - trace and fix.

S6 Know Thy Customer

JWT auth + admin dashboard + role-based access. Email notifications. Break case: role leak - customer sees another's data.

S7 Ready, Set, Ship

SEO + Open Graph + CDN + rate limiting + cookie consent + privacy page. Break case: mixed content warning.

S8 Full Circle

Solo free build (mentor watches silently). PromptAudit graduation review. Community showcase. Scale handoff conversation.

8 sessions x 2h = 16 hours total

Every session: Concept -> BUILD via prompt -> READ generated code -> Error tracing -> Commit & Push. PromptAudit active from Day 1. After graduation: join the owner network + scale handoff path.
